

**WINTER STORM WARNING  
UPDATE #1  
JANUARY 24, 2026  
11:50 PM**

The National Weather Service (NWS) has announced the Winter Storm Warning remains in effect for our area from 1:00 am Sunday to 7:00 pm Monday.

The National Weather Service (NWS) has forecast total snow accumulations between 12 and 18 inches with localized amounts up to 22 inches. The NWS predicts gusting winds up to 35 mph on Monday will cause areas of blowing and drifting snow.

The Public Works Department continues to monitor weather forecasts in preparation for snow and ice removal operations.

The City of Corning prioritizes its plowing and ice removal operations depending on weather conditions and resources available. In general, we plow priority routes first followed by secondary streets. In most cases, alleys and parking lots are plowed last.

We ask for the public's patience, as snowfall rates and limited resources can reduce our ability to rapidly clear snow and ice. The Public Works Department strives to do its best within the resources available.

Adherence to Alternate Side Street Parking Regulations is essential to enable the most efficient clearing of the streets. Please park your cars in your driveway to make plowing operations more efficient. Cars left on the street or illegally parked can significantly slow our plowing operations. Please do not follow closely behind or try to pass plow trucks. Plow drivers can have limited visibility.

Please do not plow or blow your snow in the roadway. This may cause traffic hazards and also slows down plow crews.

Police dispatchers do not coordinate plow operations and do not have additional information concerning the operational status of plowing. Please do not tie up emergency personnel and phone lines with general questions. Updates will be posted on the City's website under the "Snow Alerts" tab.

Due to the anticipated extremely cold temperatures, salt may not be effective and there may be periods when salting operations are suspended.

For power outages, please call NYSEG directly at 800-572-1131. You may also access the latest information on power outages on the NYSEG website ([www.NYSEG.com](http://www.NYSEG.com))

Plan on slippery road conditions. Make sure all windows are cleared, your vehicle is in good operating condition, and your tires have adequate tread. During the storm we advise no unnecessary travel.
