

**WINTER STORM WARNING
UPDATE #3
JANUARY 25, 2026
8:35 PM**

The National Weather Service (NWS) is continuing the Winter Storm Warning in effect for our area until 7:00 pm Monday.

The National Weather Service (NWS) is forecasting additional snow accumulations between 4 and 8 inches. The NWS predicts gusting winds up to 35 mph on Monday will cause areas of blowing and drifting snow.

The Public Works Department is currently actively plowing. They have been focusing on priority routes and are now working on secondary streets. They will be working throughout the night.

The City of Corning prioritizes its plowing and ice removal operations depending on weather conditions and resources available. In general, we plow priority routes first followed by secondary streets. In most cases, alleys and parking lots are plowed last.

We ask for the public's patience, as snowfall rates and limited resources can reduce our ability to rapidly clear snow and ice. The Public Works Department strives to do its best within the resources available.

Adherence to Alternate Side Street Parking Regulations is essential to enable the most efficient clearing of the streets. Please park your cars in your driveway to make plowing operations more efficient. Cars left on the street or illegally parked can significantly slow our plowing operations. Please do not follow closely behind or try to pass plow trucks. Plow drivers can have limited visibility.

Please do not plow or blow your snow in the roadway. This may cause traffic hazards and also slows down plow crews.

Police dispatchers do not coordinate plow operations and do not have additional information concerning the operational status of plowing. Please do not tie up emergency personnel and phone lines with general questions. Updates will be posted on the City's website under the "Snow Alerts" tab.

Due to the anticipated extremely cold temperatures, salt may not be effective and there may be periods when salting operations are suspended.

For power outages, please call NYSEG directly at 800-572-1131. You may also access the latest information on power outages on the NYSEG website (www.NYSEG.com)

Plan on slippery road conditions. Make sure all windows are cleared, your vehicle is in good operating condition, and your tires have adequate tread. During the storm, we advise no unnecessary travel.
