

WINTER WEATHER ADVISORY

UPDATE #1

JANUARY 14, 2026

11:40 PM

The National Weather Service (NWS) has updated its Winter Weather Advisory which is continuation until 1:00 pm Thursday.

The National Weather Service (NWS) has forecast snow accumulations between 1 and 4 inches. Rain is expected to transition to snow tonight which could lead to wet surfaces becoming icy as temperatures fall below freezing.

The City of Corning prioritizes its plowing and ice removal operations depending on weather conditions and resources available. In general, we plow priority routes first followed by secondary streets. In most cases, alleys and parking lots are plowed last.

We ask for the public's patience, as snowfall rates and limited resources can reduce our ability to rapidly clear snow and ice. The Public Works Department strives to do its best within the resources available.

Adherence to Alternate Side Street Parking Regulations is essential to enable the most efficient clearing of the streets. Please park your cars in your driveway to make plowing operations more efficient. Cars left on the street or illegally parked can significantly slow our plowing operations. Please do not follow closely behind or try to pass plow trucks. Plow drivers can have limited visibility.

Please do not plow or blow your snow in the roadway. This may cause traffic hazards and also slows down plow crews.

Police dispatchers do not coordinate plow operations and do not have additional information concerning the operational status of plowing. Please do not tie up emergency personnel and phone lines with general questions. Updates will be posted on the City's website under the "Snow Alerts" tab.

For power outages, please call NYSEG directly at 800-572-1131. You may also get the latest information on power outages on the NYSEG website (www.NYSEG.com)

Plan on slippery road conditions. Make sure all windows are cleared, your vehicle is in good operating condition, and your tires have adequate tread.
